**PROFILE**

Healthcare Belgium is a non-profit organization established in 2007 by the most prominent Belgian hospital groups.

**SITUATION**

Healthcare Belgium has a number of forms that needs to be filled on-cloud by patients, and doctors. Currently, the forms are paper-based, require too much time to be filled, processed, and signed.

**SOLUTION**

**SPARK** is a solution that consolidate Healthcare Belgium's forms into a single cloud-based system.

**BENEFITS**

- Reduced time for data entry and approval.
- Reduced issues and the need for corrections.

Healthcare Belgium has chosen **SPARK** as a Forms Builder software for Office 365 with user-friendly interface and zero installation or maintenance to be implemented.

Healthcare Belgium has a number of forms (various questionnaires) to be filled in by patients and/or physicians. In many cases, forms need to be filled in by a patient and then sent to a physicians for his/her signature and finally to the relevant department in the organization. Healthcare Belgium's customers are distributed across many locations making the existing paper-based system totally inefficient and expensive.

Using **SPARK** Forms, Healthcare Belgium has consolidated their forms into a single cloud-based system and rolled out a tablet-based solution to their customers. Patients and physicians use tablets to fill in, attach and sign the required fields online.

"**SPARK** cloud-based software, with its ease of use and powerful integration, gave us the ability to automatically work on all devices quickly, which was critical for us", says Frank Edmond, IT Software Engineer.

"Using **SPARK**, Patients and physicians can sign forms on a touch-screen tablet quickly and easily. An extensive use of **SPARK** business rules has dramatically reduced issues and the need for corrections", says Frank Edmond.
